Key Insights:

1. There is a visible drop in users who interested in news during February
2. No visible distinction between genders in terms of interest in news
3. News related to Health are leading in terms of user interests followed by Tech related news. Looks like users are not interested in Entertainment related news due to various reasons.
4. From the last tab we can confirm that Bahrain is leading in terms of Clicks per User ratio, also continuing the clicks per user analysis Football and Mental Health related news Sub Categories are always getting the attention from the users.
5. Most users are accessing the news via their mobile devices which is understandable since they always carry them by their side, followed by desktop device.

Recommended Actions:

1. Focus more on categories that have the highest clicks per user ratio:
   - Push notifications or promote trending topics
2. Entertainment category can be improved:
   - Test A/B experiments on entertainment stories
   - Improve headlines or thumbnails
   - Can also experiment with different formats for example articles with a quick read
3. Expand on Popular Sub Categories
   - Since Football and Mental Health receive strong engagement we can publish more articles related to these topics
   - We can create special sections for these sub categories
4. Since mobile devices are commonly used to access news articles we can:
   - Improve UI to increase the user engagement
   - Can use mobile-friendly article layouts
5. To improve the user interest we can personalize the news recommendations based on user reading behavior
